

NORDIC CHEM

Show your employees and customers you care by implementing the most comprehensive surface hygiene program on the market today

Nordic Chem protection gives you peace of mind.

- **Long-term antimicrobial coating** designed to stop and prevent the growth of microorganisms. Nordic Chem's technology reduces the chance of germs adapting and mutating
- **Up to 90 days protection guarantee** as tested in UK labs
- **Can be applied to almost any surface** including fabrics, wood, stainless steel and furniture without a sticky residue and rids bacteria, germs and odours. Nordic Chem offers durable surface protection which withstands routine cleaning.
- **Easy application** - Ensure even coverage with an Electrostatic Sprayer or a Power Mister
- One 5L drum produces enough solution to cover 1000m² which equates to the size of **four tennis courts**
- **Mechanical rather than Chemical**
Nordic Chem infiltrates the virus cell and destroys it from within

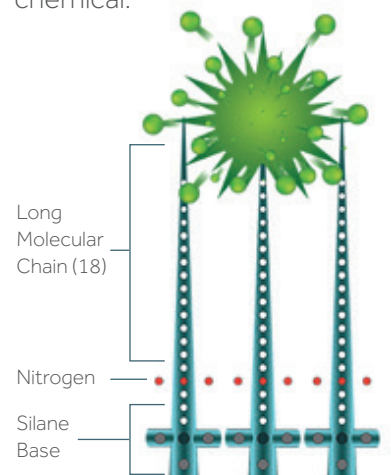

How does it work?

Nordic Chem's formula is water based and provides a long term antimicrobial coating.

Once the coating has dried it forms an invisible layer of spikes which pierces the cell membrane of the virus and destroys it.

This makes the killing of the virus mechanical rather than chemical.

Invisible

Waterbased

Colour & odourless

Easy application

Proven formula

How to apply..

Nordic Chem should be applied to a clean surface to ensure a strong bond between the product and the surface.

FimapE-Spray

FimapE-Spray is a professional gun sprayer that uses the principal of electrostatic induction to distribute Nordic Chem effectively and uniformly on surfaces. Through the electrostatic charge the drops are attracted by the 3D object, wrapping around the object evenly. The Fimap E-Spray will be able to offer a run time of four hours off a single charge, enabling the user to cover large spaces quickly.

The Powermister

Another way of applying Nordic Chem is to use a machine called a Powermister. A battery powered fine mist sprayer with a four hour run time, it's 1L tank small enough to make the machine portable but large enough to cover an area of 100m².

Testing Kit

Testing Kit available to show that the Antimicrobial coating is active and present on the surface days after application.

Contact us to find out more
01763 262 050

Nordic Chem has been scientifically proven by a certified independent UK Lab to be effective over 30 days against the human Coronavirus family.

Branded stickers

Branded stickers are provided to assure visitors that you are going above and beyond to keep premises safe.

Regardless of your application method of choice, it is important that you use the correct PPE whilst misting and ensure that the area has time to dry before the room is re occupied.
