# SUSTAINABLE, AFFORDABLE CHEMICAL FREE CLEANING

Highly effective, chemical free, cost effective and safe cleaning solution

**DID YOU KNOW.....** that you can save up to 70% of your cleaning chemical budget by switching to a natural and sustainable solution that's more effective than Bleach!

**The SAO  
Dispenser**

The Stabilised Aqueous Ozone cleaner and sanitiser, or SAO, is a highly effective and chemical-free cleaning solution. Developed by Tersano, this system is 100% natural and needs just water, oxygen and electricity to create a powerful cleaning aid. With no toxic chemicals, it is safe for use in areas where people live and work and can kill 99.999% of harmful bacteria. All without the need for potentially dangerous chemical cleaners.

## Here are some more ways SAO can help improve and optimise your cleaning procedures

- **Reduce your chemical spend** by 70% and enjoy 25% average ROI cost savings.
- **Eliminate all** manner of harmful bacteris, germs and viruses including Coronovirus/ MHV-3, Salmonella and E.coli.

- **Powerful stain remover** on all surfaces including carpets.
- **A safe and chemical-free cleaner** with no toxins, VOC's, carcinogens, or chemical residue.
- **Can be easily converted** back to regular tap water and oxygen.
- **With no chemicals, SAO can help reduce the number of waste chemicals you release** into the surrounding groundwater, rivers, streams, and dams. This makes a comprehensive SAO system one of the best ways to update your cleaning methods to modern demands and reduce your effect on the environment.

● **Better for the environment** All of these reasons make SAO a key addition in reducing the carbon footprint of your cleaning practices. The on-site dispensers eliminates transportation costs, reduces single use plastics and the need to store a cupboard full of various chemicals.

AS OF MARCH 2020  
**TERSANO**  
HAD STOPPED OVER  
**543,735,000**  
LITRES OF  
**TOXIC**  
**CLEANING CHEMICALS**  
FROM GOING DOWN  
THE DRAIN, IN TO  
OUR WATER STREAMS,  
OR IN THE AIR IN  
OUR BUILDINGS.

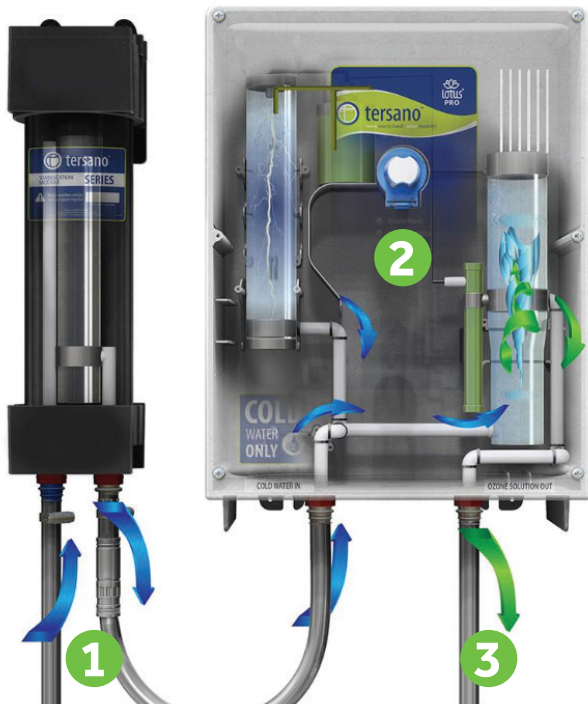

## How does it work?

The Stabilised Aqueous Ozone cleaner and sanitiser is made by introducing electricity into normal tap water to create a powerful cleaning and sanitising solution. The electricity works on a molecular level to split oxygen molecules from water and change the chemical makeup from O into O<sub>3</sub>. While in this form, oxygen becomes a highly effective cleaner sticking to grime, viruses, bacteria, mould, and dirt.

This universal efficacy allows O<sub>3</sub> to kill 99.999% of harmful contaminants. Once converted the oxygen will remain in an O<sub>3</sub> form for a while before eventually reverting to an O<sub>2</sub> form. This means that when you're done using your SAO solution it doesn't need to be thrown out or wasted.

This is all supported by Government bodies, independent test laboratories and is certified under EN1276 and EN13697 helping companies achieve their sustainability credentials.

Tested against an approved surrogate for SARS-CoV-2, which is the Coronavirus/MHV-3 the Tersano's SAO solution was effective in eliminating >99.99% (>4-log) of all four (4) enveloped viruses with a one minute dwell time.

- 1 Cold tap water enters the cartridge
- 2 Treated water moves through the "smart" dispenser and is infused with O<sub>3</sub>
- 3 Treated water ready to be dispensed
